

AccuNurse voice-assisted care

GPS navigation in your car

WHAT DO THESE TWO THINGS HAVE IN COMMON?

A MORE ACCURATE, EFFICIENT, AND SAFER WAY TO GO!

Imagine reading a map while driving... yikes! It's no wonder that more and more people drive with GPS. It's so easy...all you have to do is listen and drive. And it's safer too — your eyes never leave the road. It's the same with voice-assisted care. Voice is helping us offer better, higher quality care to your loved one. How?

- When you see caregivers listening with their headsets, they're making sure they know specific, up-to-the-minute needs of your loved one.
- When you see caregivers talking into their headsets, it's because they're making sure we have a clear record of the care your loved one has received. That way we can easily keep plans of care in line with your loved one's unique needs.
- When you see caregivers paging each other, we can do so and never have to leave your loved one alone.

It may seem a bit awkward when you see someone talking into a headset, but please, don't be afraid to stop us with a question or concern — we're glad to help you.

Excellence in care is our top priority. And voice-assisted care is helping us take the quality care you're expecting to a whole new level.
