

# On the Cutting Edge of Technology with AccuNurse

*Shoreline Care Center Is Now Using Voice Technology!*

## What Does This Mean for Our Communities and Families?

It means plenty. We're proud to implement voice technology, first and foremost for our elders and families; but also for our care team. Here are just a few of the AccuNurse benefits we anticipate:

- Empowers our care team to provide more individualized, quality care for each of our elder residents. Our care team can hear any resident's personalized care plan at any time, discreetly page fellow staff members for assistance and document care activities at the point-of-care without ever needing to access cumbersome paper records.
- Enables our care team to communicate more efficiently and streamline their daily workflows. All of the lag time and guesswork associated with other types of charting is eliminated because complete and accurate documentation is captured as the user speaks it at the point of care.
- The ease of use and immediacy of AccuNurse gives our care team quick access to accurate, updated records and care plans. This in turn, will improve survey results and help us achieve compliance with ever-changing federal and state regulations.
